

Dear FCC: Amateur Radio Emergency communications services rely on the 440Mhz band for effective local emergency communications. Part 15 devices should not be allowed to opearte on the same frequencies as amateur radio. Harmful interference is rampid with these type of devices as there is absolutely NO regulation. Certainly the FCC is not going to have the time or resources to do so - nor the amateur radio service. Amateurs spend a huge amount of time just dealing with power line interference problems, cable egress issues, dsl radiation, computer radiation, cable modem radiation, etc.We have a difficult time as it as is to get professionals in these industries to control their harmful interference. Consumer devices would make it impossible. Amateur Radio was the only source of communication at the World Trade Center and the Pentigon on Sept 11th. Guess which frequencies they used? Pete Myers, WZ5PM
